

CONSISTENT RESULTS

Lactoferrin Diagnostics

Reliable results to improve patient care

- Differentiate patients with Irritable Bowel Syndrome (IBS) from those with Inflammatory Bowel Disease (IBD)
- Monitor lactoferrin levels in patients with IBD to help measure therapeutic outcomes
- Robust clinical cut-off offers clear interpretation
- Robust stability of lactoferrin supports accurate detection of intestinal inflammation and facilitates sample collection

LACTOFERRIN SCAN®

LACTOFERRIN CHEK®

Lactoferrin Test Kits

Product Order Information

Product Name	Cat. No.	Sample Type	Time to Result	Format
LACTOFERRIN SCAN®	T5009	Fresh, frozen Refrigerated or room temperature	~75 minutes	Microplate ELISA quantitative
LACTOFERRIN CHEK®	T5008	Fresh, frozen Refrigerated or room temperature	~75 minutes	Microplate ELISA qualitative

What is lactoferrin?

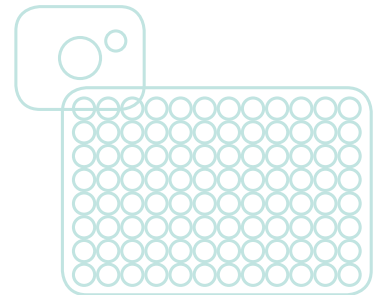

Lactoferrin is a protein biomarker that is present during an inflammatory response. Studies have shown that fecal lactoferrin is elevated in patients suffering from inflammatory diarrhea and active Inflammatory Bowel Disease (IBD).

Lactoferrin testing is a valuable tool in diagnosing and monitoring patients with IBD

- Lactoferrin diagnostics by TECHLAB are the first US FDA-cleared tests to detect intestinal inflammation in IBD patients with active flares
- Measuring lactoferrin levels in patients diagnosed with IBD can help indicate the degree of IBD severity

Diagnosing IBD can be challenging, but is important because IBD can be life-altering and life-threatening

- 75% of people with Crohn's Disease and 25-45% of people with ulcerative colitis will need surgery to **remove all or part of their colon**
- Sending out tests takes time patients may not have
- Lactoferrin diagnostics by TECHLAB can be run in-house quickly and cost-effectively to help physicians make critical, timely decisions
