Peezy Midstream

The Urine Collection Device For

**Fewer False Positives.
Better Decisions.
Happier Patients.**

Right-First-Time Urine Specimens

Reduces repeat testing and follow-up appointments for UTI and prenatal screening.

Improves Diagnostic Accuracy

Minimises false positives, supporting appropriate clinical decision-making.

Significantly Reduces Sample Contamination

Clinical evidence on Peezy shows contamination rates as low as 0-2.5%, compared with up to 30% using standard collection methods.

Delivers True Midstream Urine Samples

The only collection solution designed to consistently capture the midstream fraction in line with global guidelines.

Supports Antimicrobial Stewardship

Addresses contamination-driven overtreatment, where up to 70% of patients may be treated for non-existent infection.

Cost Saving for Healthcare Systems

Use of Peezy Midstream in women's health screening could generate direct annual savings of £10,767,150*.
