

# Carbon Reduction Plan

Supplier name: .....Una Health Ltd.....

Publication date: .....June 2025.....

## Commitment to achieving Net Zero

Una Health is committed to achieving Net Zero greenhouse gas emissions by 2050.

## Baseline Emissions Footprint

In 2024, Una Health re-baselined its emissions to reflect a significant operational change, the expansion from one unit in 2023 to three operational units in 2024. This expansion supports company growth, improved warehousing, and customer service enhancements.

The re-baselined footprint more accurately represents Una Health’s operational emissions and aligns with our commitment to transparent and robust reporting. We consider the requirements of Procurement Policy Note (PPN) 06/21: Taking Account of Carbon Reduction Plans in the Procurement of Major Government Contracts and follow the associated guidance in the preparation of this report.

Una Health Ltd operates from premises located in Stoke-on-Trent, with staff located both on-site as well as field-based sales representatives covering the UK.

**Baseline Year: 2024 (Re-baselined)**

**Additional Details relating to the Baseline Emissions calculations.**

Una Health began formal emissions reporting in 2023, covering Scope 1, Scope 2, and a subset of Scope 3 emissions. With the 2024 expansion, Scope 3 reporting has been improved and continues to evolve through engagement with supply chain partners.

Baseline year emissions:	
EMISSIONS	TOTAL (tCO <sub>2</sub> e)
Scope 1	17.72
Scope 2	47.87
Scope 3 (Included Sources)	49.32 <ul style="list-style-type: none"> <li>• Business travel: 7.5</li> <li>• Grey Fleet: 5.15</li> <li>• Employee Commuting: 36.65</li> <li>• Waste disposal: 0.02</li> <li>• Upstream transportation: We are working with our courier providers to include emission data for all operations going forward.</li> <li>• Downstream transportation and distribution: We are working with our courier providers to include emission data for all operations going forward.</li> </ul>
<b>Total Emissions</b>	<b>114.91</b>

### Current Emissions Reporting

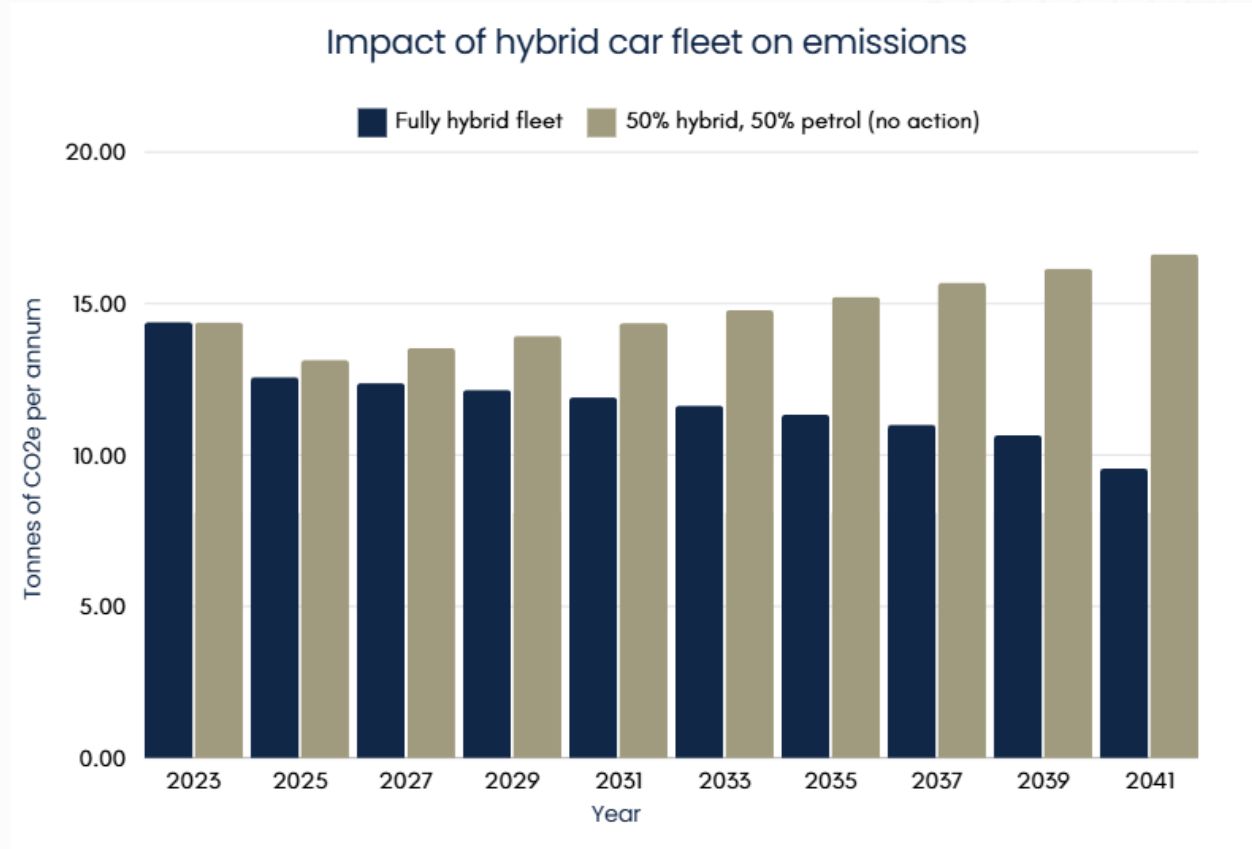

The current baseline year is 2024, re-baselined due to the operational expansion. Reporting covers Scope 1 and Scope 2 in line with Streamlined Energy and Carbon Reporting (SECR) and a defined subset of Scope 3 emissions as per PPN 06/21 guidance.

### Emissions reduction targets

Una Health has made steps to increasing the amount of hybrid cars in our fleet, with 50% hybrid in 2023. To continue our progress to achieving Net Zero we will endeavour to increase this further, with an aim to have a 100% hybrid fleet by 2041.

We project that this will decrease our fleet emissions from a projected 16.63 tCO<sub>2</sub> without action to 9.55 tCO<sub>2</sub>e by 2041, a decrease of 43%.

Factors in expected workforce increase in 2024-25 and 3% increase in miles every other year due to increase in workforce.

## Carbon Reduction Projects

Una Health expanded its Stoke-on-Trent operations in 2024, increasing from one to three operational units. This change supports long-term growth, enhanced logistics, and greater efficiency. Despite a larger footprint, Una Health is implementing carbon-saving projects to help offset this.

## Carbon Reduction Initiatives

In the future we hope to implement further measures such as:

- In January 2024, Una Health expanded office space to accommodate company growth. Initiatives are in place to make the premises more energy-efficient. Examples include LED energy efficient lighting.
- Operations will endeavour to simplify and reduce upstream shipments, especially from overseas.
- Recycling projects and sustainable packaging to reduce waste. Una Health will look into more compact packaging to reduce space required during shipping.
- Recycling bins will be placed around site to encourage more recycling.

- Reducing office printing.
- Education of our workforce to participate in decarbonisation of the company.

## Declaration and Sign Off

This Carbon Reduction Plan has been developed in consideration of Procurement Policy Note (PPN) 06/21 and in line with the associated guidance and reporting standards (April 2023 update).

Emissions reporting is consistent with:

- GHG Reporting Protocol Corporate Standard
- UK Government GHG Conversion Factors for Company Reporting
- SECR requirements for Scope 1 and 2
- The Corporate Value Chain (Scope 3) Standard for Scope 3 emissions

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).
